CVE-2024-3094

Generated: May 15, 2026 at 12:56:33

FINDINGS

The CVE-2024-3094 vulnerability involves malicious code embedded in the XZ Utils data compression library, specifically in versions 5.6.0 and 5.6.1. This code can compromise the security of systems using these versions, potentially allowing unauthorized access.

RECOMMENDATIONS

Downgrade XZ Utils to an uncompromised version, such as XZ Utils 5.4.6 Stable, and monitor for malicious activity.
